

WHY RABBIT MANURE?

Rabbit manure is often called "Garden Gold" because it is one of the few animal manures that can be applied directly to plants without first composting.

Unlike many other manures, rabbit droppings are:

- Low odor
- Weed-seed friendly? No—typically fewer viable weed seeds than many livestock manures
- Rich in beneficial organic matter
- Slow-releasing nutrients that won't overwhelm plants
- Easy to spread and store

Rabbit manure typically contains:

Nitrogen (N) – Encourages leafy green growth

Phosphorus (P) – Supports healthy roots, flowers, and fruit production

Potassium (K) – Improves plant health, disease resistance, and overall vigor

It also adds valuable organic matter that improves soil over time.

Did You Know?

🐰 One rabbit can produce hundreds of pounds of nutrient-rich manure every year.

🌱 Rabbit manure contains billions of beneficial organic compounds that help feed healthy soil.

🌻 Healthy soil grows healthier plants—and healthier plants produce more flowers, fruits, and vegetables.

Thank you for supporting our rabbitry!

We hope your garden grows beautifully!

PREMIUM RABBIT MANURE

The Natural Fertilizer That Plants Love!

- ✓ Ready to Use
- ✓ No Composting Required
- ✓ Great for Vegetables, Flowers & Houseplants
- ✓ Safe for Seedlings
- ✓ 100% Natural

"Feed your soil naturally and let your plants do the rest."

Bonus Garden Benefits

Small Pieces of Hay

Occasional bits of hay are completely normal.

They help:

- Add organic matter
- Feed beneficial soil microbes
- Improve soil structure
- Increase moisture retention as they break down

Rabbit Fur

Small amounts of rabbit fur are also beneficial.

Rabbit fur naturally:

- Breaks down slowly
 - Adds nitrogen
 - Improves moisture retention
 - Encourages earthworm activity
 - Helps build healthy soil
- Many gardeners intentionally bury rabbit fur around tomatoes, peppers, roses, and fruit trees.

How to Use Rabbit Manure

Garden Beds

Spread $\frac{1}{4}$ – $\frac{1}{2}$ inch over the soil and lightly work it into the top few inches.

Around Existing Plants

Apply a small handful around the drip line.

Water normally.

Containers

Mix approximately:

1 part rabbit manure
to

8–10 parts potting soil

Compost

Rabbit manure is an excellent compost accelerator and provides valuable nitrogen.

Storage

Store unused manure:

- ✓ In a cool, dry place
 - ✓ Out of direct rain
 - ✓ In a breathable paper bag, bucket, or partially open container
- Avoid storing in airtight containers if moisture is present.
- Properly stored rabbit manure can remain useful for years.

Frequently Asked Questions

Does it smell?

Very little. Rabbit manure has much less odor than most livestock manure.

Will it burn my plants?

Rabbit manure is considered a cold manure and is generally safe to apply directly to the garden. As with any fertilizer, avoid excessive application.

Can I use it around vegetables?

Absolutely!

It's excellent for:

- Tomatoes • Peppers
- Cucumbers • Squash • Lettuce
- Herbs • Berries • Fruit trees

Can I use it for flowers?

Yes!

Gardeners love rabbit manure for:

- Roses
- Annual flowers
- Perennials
- Hanging baskets
- Houseplants

Is composting required?

No.

Rabbit manure is one of the few animal manures that can be used immediately.
